

## **KrabbeCURES Frequently Asked Questions**

### **What is the purpose of the KrabbeCURES?**

The purpose of the KrabbeCURES is to bring the Krabbe disease community together and collect data.

Some of the goals of the KrabbeCURES are:

- To characterize and describe the Krabbe disease population as a whole and to gain a better understanding of the spectrum of clinical variants in individuals with Krabbe disease of all stages. This includes but is not limited to collecting information on: diagnosis, treatment, medical history, socio-economic environment, and outcomes.
- To understand the changes of Krabbe disease over a lifetime as well as to gain information on clinical practice patterns and variations over the course of treatment.
- To facilitate the development of best practice and management guidelines and recommendations to optimize care, improve quality of life and outcomes, and standards of care.
- To provide information regarding ongoing research studies and clinical trials. Study Participants may consent to be contacted by researchers for recruitment into Institutional Review Board (IRB) approved studies.
- To understand gaps in insurance coverage for the care of individuals with Krabbe disease

### **What is a Natural History Study?**

A natural history study is a study designed to track the course of a disease over time. It includes people who have a specific medical condition or disease. It may also include those who are at risk of developing the condition/disease. This type of research identifies demographic, genetic, environmental and other information that may be common within the disease and its outcomes. A natural history study can also show the differences in symptoms and changes over time that are seen in different people with the same disease. Natural history studies often aim to find unknown similarities within the disease population. They have many potential uses such as patient care best practice development and clinical trial recruitment. Data for natural history studies are often collected via patient registries.

### **What types of data will be collected in KrabbeCURES?**

The data collected is uniform and includes but is not limited to

- Socio-demographics
- Diagnostics
- Treatment and disease progression
- Management of care
- Quality of life
- Symptoms
- Diagnostic odyssey

## **How is the data collected? Is the data secure?**

Data is collected through a secure web-based application (that can be accessed by a computer, tablet, or phone) developed by the National Organization for Rare Disorders, Inc. (NORD®), (learn more about NORD below). Study participants respond to questions grouped within a series of surveys developed per study standards and in collaboration with disease specific experts. KrabbeCURES follows strict government guidelines to assure patient information is protected. The platform is served over HTTPS, which means that the data is encrypted when being sent from the user's browser to the NORD servers. The data is also kept encrypted in the NORD database. Communications between the platform application server and the database are also encrypted. As with any information you provide electronically, there is a very rare chance that your privacy could be compromised. However, the study and the security measures minimize the chance of this occurring.

## **What is a Research Study Sponsor?**

A Research Study Sponsor is an individual, company, institution, or organization. They are responsible for choosing appropriately trained and experienced researchers to conduct the study. They are also responsible for the initiation and management of a research study. Additionally, the sponsor is responsible for the costs associated with conducting a study. They ensure that the study is conducted in a reputable, ethical manner and upholds regulations as they apply to the study. The sponsor of this study is KrabbeConnect.

## **Who is KrabbeConnect?**

KrabbeConnect bridges science and patient knowledge to improve care and find a cure. Our goal is to reach a day in which each patient receives an early diagnosis, has access to state-of-the-art care, and lives a life free of Krabbe disease. Our core values are compassion, collaboration, advocacy, innovation, transparency.

## **What is a Principal Investigator?**

The Principal Investigator (PI) is the person with the primary responsibility for the design and conduct of the research project or study. The PI is responsible for oversight of all aspects pertaining to the conduct of the study, its staff and the research on the data contained within.

## **Who is a Study Participant?**

A Study Participant is the individual about whom information is entered into the study. (i.e., the individual with a diagnosis of globoid cell leukodystrophy). In the case of an independent person of legal age, this individual will consent for and enter information about themselves. If an individual is not of legal age or is an adult who requires someone to act on their behalf, a person (Caregiver/LAR, see below) who is legally responsible for their health care will provide consent and enter information about the Study Participant.

## **What is a Legally Authorized Representative (LAR)?**

An LAR is an individual who is authorized under applicable law to consent and enter data in the study on behalf of another individual. The LAR may be a parent, grandparent, spouse, caregiver, or guardian as long as they have the legal authority to grant consent on behalf of another who is eligible to participate in research. An LAR will sign up on the IAMRARE platform with a Caregiver account. When an LAR acts on behalf of a study participant, they are considered to be the reporter in the research.

### **What is a Designated Representative?**

A Designated Representative is a legal adult who was the caretaker of an individual who passed away from Krabbe disease. This may be a spouse, parent, sibling, offspring, close relative, close friend, guardian and/or significant other of this individual. This person must have had knowledge of and participated in the medical care of the deceased. These individuals are permitted to enter retrospective data on their behalf.

### **What is an Informed Consent Form?**

An ICF is a document that provides potential participants with key information about the study. This document helps potential participants to make an informed decision whether to join or not. Information will include topics such as: the risks and benefits of the research project, use of data, and participant privacy. If they choose to join the study, participants are required to electronically sign the ICF. This indicates that they agree to the terms as described before entering data into the study or responding to surveys.

### **After consenting, can a Participant choose to stop participating in the study?**

Participants are able to withdraw from the study at any time. However, researchers may still use the information that they have collected prior to the participant changing their mind. Information that has already been shared with researchers prior to withdrawal cannot be retrieved or removed.

### **What is an Institutional Review Board (IRB)?**

An IRB is a board formally designated by an institution or investigator to review, approve the initiation of, and conduct periodic review of research involving people. The primary purpose of such an assessment is to assure the protection of the rights and welfare of the participants in the study. This is also known as an Ethics Committee (EC) or Research Ethics Board (REB in Canada).

### **What is a Scientific Advisory Board?**

A Scientific Advisory Board is a committee that may include scientists, doctors, and patient advocates. They oversee the conduct of the study. The board advises on the development of surveys and reviews combined study data and the use of this study. They will ensure proper evaluation of all research requests for use of the study data. They will also review any protocol or confidentiality deviations and ensure that any such deviations are reported to the IRB.

## **Who can join the study?**

This study is open to anyone who has a confirmed diagnosis of globoid cell leukodystrophy (Krabbe disease).

## **Is there a cost to participate?**

There is no cost to the patient to join this study. KrabbeConnect and its sponsors absorb the cost of the study for its members.

## **Is there a payment for participating?**

You will not be paid for the information you provide. As a participant in this study, you will be eligible to receive awareness tokens for Krabbe disease. These awareness tokens are dependent upon the funding available for the study. United States and United Kingdom residents will be eligible to receive a US token (equivalent in pounds sterling) gift card, provided that you agree to being a potential recipient.

## **How long will this study last?**

A study on the IAMRARE platform will typically be open for at least five years. Participants will be asked to return to the study periodically to update their information.

## **Can data be collected worldwide?**

The study uses an online platform which allows participants to contribute data from anywhere in the world. Individuals from other countries who enter data into the study should be aware that data and privacy laws are different in the U.S. from other countries. This U.S. based study will protect data and privacy according to U.S. requirements.

## **What are the GDPR considerations?**

For individuals living outside the United States who choose to share information about themselves, the same protections for privacy and confidentiality are offered as in the United States. Residents of the European Union and Switzerland have additional particular rights related to personal information. This information is disclosed within the informed consent document. If an individual signs this document, they acknowledge that they are disclosing information that would otherwise be private. Privacy laws in an individual's country may have different protections than those provided in the United States.

Study participants who are residents of the European Union and Switzerland are entitled to:

- Request to obtain access to and rectification or erasure of personal data;
- Receive personal data in a portable, readily-accessible format;
- Restrict or withdraw permission for the processing of personal information; and
- Lodge a complaint with an appropriate supervisory authority.

## **Where is the data stored?**

NORD stores Sponsor and Participant Study Data on NORD encrypted servers and/or encrypted servers of third-party vendors hosted in Canada. Regular back-up at commercially acceptable intervals is provided. These servers meet industry standards and are compliant with US and international regulations, including GDPR.

## **Is the data safe?**

The study follows strict government guidelines to assure patient information is protected. The platform is served over HTTPS, which means that the data is encrypted when being sent from the user's browser to the NORD servers. The data is also kept encrypted in the NORD database. Communications between the study platform application server and the database are also encrypted. As with any information you provide electronically, there is a very rare chance that your privacy could be compromised. However, the study and the security measures minimize the chance of this occurring.

## **Who owns the data?**

The study data are owned by the study sponsor, KrabbeConnect. KrabbeConnect decides how and with whom to share the data. NORD staff will have access to the data for activities related to support and maintenance of the Platform and will collect Platform-wide participation statistics. The specifics will be outlined in your informed consent.

## **Who will have access to Protected Health Information (PHI)?**

All data, including those with PHI, will be stored in a password protected secure server. Access to PHI will be limited to:

- Approved members of the KrabbeCURES research team
- NORD staff, in cases where technical support is needed and with the permission of study staff
- With agreement from the Sponsor, NORD may conduct IRB-approved, cross-disease research using study data.

In all cases, your privacy will be protected. The Registry Advisory Board will evaluate all requests for data from researchers. Researchers will only be provided with the minimum data necessary to accomplish their research study goals. Data containing PHI will only be shared if the research cannot be done without it. The researchers will be required to sign a Confidentiality Agreement in which they promise to keep your information safe.

## **How is the study maintained?**

The study is maintained by NORD who hosts the study on its web-based application. NORD provides ongoing technical support of the system. KrabbeConnect provides the day-to-day management of their study.

## **Who is NORD – the National Organization for Rare Disorders, Inc.?**

NORD, an independent nonprofit, is leading the fight to improve the lives of rare disease patients and families. We do this by supporting the rare community, its people, and organizations. We work together to accelerate research, raise awareness, provide valuable information, and drive public policy that benefits the estimated 25-30 million Americans impacted by rare diseases.

Learn more about NORD at <https://rarediseases.org/>.
